

Rewarded-ad ideas for Luzia

1. **Product change** One extra growth step for Toki today
2. **Product change** Feature your new app on Explore for 24 hours
3. **Product change** Your mini app shown in a community row for 24 hours

Each idea takes two slides: its whole flow, step by step, then why it works. The score pages at the end score every idea the review saw.

In every idea the user chooses to play. The reward comes once, only after the play is verified, and closing the game or a failed ad uses nothing up.

2 idea(s) split the reviewers, so they aren't drawn; the Needs your call page at the end lists them.

The qa step finished only part of its work: core flows that still fail: f1.

One extra growth step for Toki today

The new part: A once-a-day bonus treat on the Toki card on Chats home that gives Toki one extra growth step, on top of normal care.

The offer says: "Play a short game to give Toki a bonus treat: 1 extra growth step, once today." Saying no changes nothing.

TODAY

Chats home with the Toki card, as today.

WHEN IT APPEARS

Chats home opens for a user who has met Toki and has not taken today's bonus treat.

THE OFFER

A strip under the Toki card offers 1 extra growth step for a short game.

THE AD PLAYS

The user plays a short sponsored game and can close it anytime.

WHAT THEY GET

A new screen opens after the verified play.

They get: growth step, permanent, one per day · **How often:** 1 per day, resets at midnight local time

Why this works for your app

WHAT THE USER GETS

Growth step, permanent, one per day.

WHAT THE APP GETS

Toki is pitched as a pet that grows with care, so owners want visible progress and a daily reason to return. A free extra growth step costs the app nothing to serve and turns Toki into a daily return habit that also earns ad revenue.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Every user sees the same offer.

Reach scenario, not a measurement: the offer sits on the first screen people see, and appears only when this happens: Chats home opens for a user who has met Toki and has not taken today's bonus treat.

When the reward runs out: Once today's treat is used, the strip shows when tomorrow's treat unlocks, giving the user a reason to come back and care for Toki again.

Feature your new app on Explore for 24 hours

The new part: A labeled 'Fresh creations' row on Explore where a user's new public app can be featured for 24 hours, with credit to the original when it is a remix.

The offer says: "Play a short game to feature your next app in the Fresh creations row on Explore for 24 hours once it's public." Saying no changes nothing.

TODAY

On Explore, the user taps Create app.

WHEN IT APPEARS

The create screen opens after the user taps Create app on Explore.

THE OFFER

The create screen opens with a banner offering a 24-hour feature on Explore.

THE AD PLAYS

The user plays a short sponsored game.

WHAT THEY GET

A new screen opens after the verified play.

They get: 24 hours in the Fresh creations row on Explore, 24 hours, starting when the creation becomes public · **How often:** 1 per day, resets at midnight local time; one feature per creation.

Why this works for your app

WHAT THE USER GETS

24 hours in the Fresh creations row on Explore, 24 hours, starting when the creation becomes public.

WHAT THE APP GETS

People who make apps here want others to see them, and a day in a labeled row on Explore is worth a short game. When the creation is a remix, the original also gets credit. The app gets more creations made public and more browsing between apps, at no model cost.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Every user sees the same offer.

Reach scenario, not a measurement: the offer sits on a screen one tap in, and appears only when this happens: The create screen opens after the user taps Create app on Explore.

When the reward runs out: When the 24 hours end, the app leaves the row with a note that the next creation can be featured tomorrow, which brings the user back to make another.

Your mini app shown in a community row for 24 hours

The new part: A clearly labeled 'From returning creators' row on the Explore catalog, where one play shows the user's own published mini app for 24 hours, plus a 7-day badge on that app's card.

The offer says: "Welcome back! Play a short game to show your app in the 'From returning creators' row for 24 hours and get a 7-day creator badge." Saying no changes nothing.

TODAY

A creator returns after several days away and opens the Explore catalog in the Create tab.

WHEN IT APPEARS

A user who has published at least one mini app opens the Create tab's Explore catalog, and their last session was 3 or more days ago.

THE OFFER

A card offers to show their app in the 'From returning creators' row for 24 hours, plus a 7-day badge, for one short game.

THE AD PLAYS

The user plays a short sponsored game, which they can close at any time.

WHAT THEY GET

A label appears: "From returning creators ♦ Llama Escape By you Here for 24 hours ★ Returning creator · 7 days".

They get: spot in the returning creators row, 24 hours in the row, badge for 7 days · **How often:** 1 per week per user, and only on a return after 3 or more days away; resets 7 days after it was taken.

Why this works for your app

WHAT THE USER GETS

Spot in the returning creators row, 24 hours in the row, badge for 7 days.

WHAT THE APP GETS

Explore already shows likes, saves, and rank badges, so creators care about being seen, and a returning creator gets a concrete reason to come back to their work. The reward costs nothing to serve and never touches the ranked Trending list, so the catalog stays fair. The app gets returning creators and fresh community apps in front of other users.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Every user sees the same offer.

Reach scenario, not a measurement: the offer sits on a main tab, and appears only when this happens: A user who has published at least one mini app opens the Create tab's Explore catalog, and their last session was 3 or more days ago.

When the reward runs out: When the 24 hours end, the app leaves the row with a note showing any new likes and saves it picked up, which pulls the creator back to check on it and make or remix another app.

Every idea the review scored

Idea	Title	Verdict	Checks	Why
c01	One extra growth step for Toki today	accepted	11/11	passed every check
c08-rev	Feature your new app on Explore for 24 hours	accepted	11/11	a revision of c08
c06	Your mini app shown in a community row for 24 hours	accepted	11/11	passed every check
c03	A new outfit for your virtual pet Toki for 3 days	conditional	10/11	didn't pass backed by what was seen in the app
c04-rev	Show your published app in a Player Picks row for 24 hours	conditional	10/11	didn't pass backed by what was seen in the app; a revision of c04
c07	Unlock a gold card frame for your apps	rejected	10/11	didn't pass backed by what was seen in the app
c09	Cheer an app's maker and wear a supporter badge	rejected	9/11	didn't pass people already value what it gives, backed by what was seen in the app
c04	Show your new app in a Player Picks row for 24 hours	rejected	10/11	didn't pass backed by what was seen in the app
c02-rev	3 extra starter templates for your next app, for 24 hours	rejected	10/11	didn't pass backed by what was seen in the app; cost check: what it costs to serve wasn't observed; a revision of c02
c02	Your published app shown in Explore's Spotlight for 24 hours	rejected	8/11	didn't pass people already value what it gives, backed by what was seen in the app, protects the subscription
c08	Feature your remix for 24 hours, credited to the original	rejected	10/11	didn't pass backed by what was seen in the app
c10	Your remix shown in Fresh remixes for 24 hours	rejected	9/11	dropped by code: duplicate of c08: same benefit (Fresh remixes placement); didn't pass backed by what was seen in the app, the right moment
c05	A treat outfit for Toki when you come back	rejected	11/11	dropped by code: duplicate of c03: same benefit (pet outfit)

Needs your call

- **c03 · A new outfit for your virtual pet Toki for 3 days**

"backed by what was seen in the app": one reviewer: no (The rationale says users who keep Toki on already open the home screen to care for it. The model observes the Toki promo and intro,, but not that existing user behavior or a pet-care flow); another: yes (The claims about the Toki card, its return-visit framing and the pet being switchable on and off match,,, and m2. The absence of a paid plan or limit is worded as not seen, and the rest is the proposal's own new content or a prediction).

To approve: {"id": "c03", "splits": ["c2_evidence"]}

- **c04-rev · Show your published app in a Player Picks row for 24 hours**

"backed by what was seen in the app": one reviewer: no (The 'what makes it work here' field calls 580 a like count, but records only the text '580,' unlike the elements explicitly labeled as like counts. That claim about the app today is unsupported); another: yes (The claims about the app as it is today (prompt or remix creation, public once published, the Luzia's Pick badge, the Trending counts and rank badges) match,, and/e17/e18. What was not seen is worded as not seen).

To approve: {"id": "c04-rev", "splits": ["c2_evidence"]}
