

Rewarded-ad ideas for Janitor AI

1. **Product change** Faster replies for 30 minutes with a Hidden Gems character
2. **Existing opportunity** Double your Janitor Plus memory for one chat

Each idea takes two slides: its whole flow, step by step, then why it works. The score pages at the end score every idea the review saw.

In every idea the user chooses to play. The reward comes once, only after the play is verified, and closing the game or a failed ad uses nothing up.

2 idea(s) split the reviewers, so they aren't drawn; the Needs your call page at the end lists them.

The explore step finished only part of its work: it used all 3 relaunches allowed (3 in the tour, 2 after it), so it stopped before seeing everything it planned to.

Faster replies for 30 minutes with a Hidden Gems character

The new part: A check for whether a character is in Hidden Gems when its chat history sheet opens, a card there offering 30 minutes of faster replies, and a new cheer count on the creator's public profile.

The offer says: "Play a short game to get faster replies from this character for 30 minutes, and send 1 cheer to its creator." Saying no changes nothing.

TODAY

The user opens saved chats with a character that is currently in Hidden Gems.

WHEN IT APPEARS

The chat history sheet opens for a character that is currently listed in Hidden Gems

THE OFFER

A card offers 30 minutes of faster replies with this character, plus one cheer for its creator, for one short game.

THE AD PLAYS

The user plays a short sponsored game.

WHAT THEY GET

The card shows 'Faster replies on for 30 minutes'.

WHAT THEY GET

A label appears: "+1 cheer".

They get: faster replies, 30 minutes · **How often:** 2 per day, resets at midnight local time; one cheer per creator per day

Why this works for your app

WHAT THE USER GETS

Faster replies, 30 minutes.

WHAT THE APP GETS

Users returning to a character they already chat with get a short taste of a paid Janitor Plus benefit right before they chat, and they also help the smaller creator who made it. That steers chat time toward new characters from small creators, which is the goal Hidden Gems already serves. It also shows free users what the paid plan adds without giving away extra replies.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Janitor Plus members already get faster replies and don't see this card.

Reach scenario, not a measurement: the offer sits in a pop-up over a main tab, and appears only when this happens: The chat history sheet opens for a character that is currently listed in Hidden Gems.

When the reward runs out: When the 30 minutes end, replies return to normal speed with a note that Janitor Plus gives faster replies in every chat, all the time, so the user can compare and decide.

Double your Janitor Plus memory for one chat

Where the offer appears: A card at the bottom of the chat history sheet, under the Start new chat button.

The offer says: "Play a short sponsored game to give this chat 10× memory, double your Janitor Plus 5×, for your next 5 replies today." Saying no changes nothing.

TODAY

The subscriber opens My Chats and taps a character with saved chats.

WHEN IT APPEARS

A Janitor Plus subscriber opens a character's chat history sheet that has at least one saved chat.

THE OFFER

The chat history sheet shows a card offering 10× memory for the next 5 replies.

THE AD PLAYS

The subscriber plays a short sponsored game.

WHAT THEY GET

The card confirms that 10× memory is on for the next 5 replies in this chat today.

They get: 5 replies with 10× context, next 5 replies in the chosen chat, until midnight local time · **How often:** 1 per day, resets at midnight local time; one chat per boost

Why this works for your app

WHAT THE USER GETS

5 replies with 10× context, next 5 replies in the chosen chat, until midnight local time.

WHAT THE APP GETS

Janitor Plus is sold on memory for long chats, and the chat history sheet is where users reopen their saved chats. That makes a bigger memory boost for one chosen chat, offered right there, more of the exact thing subscribers pay for. It gives the app a new, optional way to earn from its paying users without changing anything they already have. Because the 5 boosted replies need fresh model work with a larger context, the offer pays for itself at typical North American ad rates; in lower-paying regions it needs cheaper serving or cached character details.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Only Janitor Plus subscribers see this offer, since it builds on the memory they already pay for. It is always optional.

Reach scenario, not a measurement: the offer sits in a pop-up over a main tab, and appears only when this happens: A Janitor Plus subscriber opens a character's chat history sheet that has at least one saved chat.

Cost check (CONDITIONAL): a view pays for what it costs to serve only where ad prices are high. The review's cost line has the numbers.

When the reward runs out: After the 5 replies, the chat returns to the usual 5× memory with a note that the boost can be taken again tomorrow, which brings the subscriber back for their next long session.

Every idea the review scored

Idea	Title	Verdict	Checks	Why
c08-rev	Faster replies for 30 minutes with a Hidden Gems character	accepted	11/11	a revision of c08
c03-rev	Double your Janitor Plus memory for one chat	accepted	11/11	cost check: a view pays for what it costs to serve only where ad prices are high; a revision of c03
c06	Pick up your story with 5× memory for 10 replies	conditional	10/11	didn't pass backed by what was seen in the app; cost check: a view pays for what it costs to serve only where ad prices are high
c07	Golden checkmark for 24 hours, plus a cheer for the creator	conditional	10/11	didn't pass backed by what was seen in the app
c08	Faster replies for 30 minutes with a new creator's character	rejected	10/11	didn't pass backed by what was seen in the app
c03	Double your Janitor Plus memory for one chat	rejected	10/11	didn't pass backed by what was seen in the app; cost check: a view pays for what it costs to serve only where ad prices are high
c02	Faster replies for 1 hour	rejected	10/11	dropped by code: duplicate of c08: same benefit (faster replies); didn't pass backed by what was seen in the app
c01	Better memory for your next 10 replies, free today	rejected	10/11	dropped by code: duplicate of c06: same benefit (extra chat memory); didn't pass backed by what was seen in the app; cost check: a view pays for what it costs to serve only where ad prices are high
c05	Welcome back: faster replies for 2 hours	rejected	10/11	dropped by code: duplicate of c08: same benefit (faster replies); didn't pass backed by what was seen in the app
c04	Shining golden checkmark on your profile for 7 days	rejected	9/11	dropped by code: gives payers more of "Golden checkmark next to your username", but no amount or cap for it was observed (linked by the benefit-naming call); didn't pass people already value what it gives, backed by what was seen in the app

Needs your call

- **c06 · Pick up your story with 5× memory for 10 replies**

"backed by what was seen in the app": one reviewer: no (The 'what makes it work here' field says the app knows when a chat is 3+ days old from. That element shows only a time of day, not a date or an observed ability to calculate days since the last chat); another: yes (The claims about today's app are supported: the 5× context paid benefit, the sheet with its Start new chat button, the 15-message row and the 15 chats badge. The free-tier memory size is explicitly labelled as not seen, and the new card, reward and copy are the proposal's own additions).

To approve: {"id": "c06", "splits": ["c2_evidence"]}

- **c07 · Golden checkmark for 24 hours, plus a cheer for the creator**

"backed by what was seen in the app": one reviewer: no (What makes it work here claims the checkmark costs nothing to serve, which does not establish, and says there is no visible way to show support beyond following, although shows a share action. These are unsupported claims about the app today); another: yes (The claims about the app today are supported: the Plus checkmark, Hidden Gems, the Follow button and the safe rating of. The claim of no visible way to show support is worded as an observation and matches's recorded elements. The cheers count, sheet and copy are the proposal's own additions).

To approve: {"id": "c07", "splits": ["c2_evidence"]}

The reviewers split on these ideas, so none is drawn. To draw one, add its "To approve" entry to the list in **flows/approvals.json** and run flows again.
