

Rewarded-ad ideas for Perplexity

1. Existing opportunity 1 extra Computer task today

Each idea takes two slides: its whole flow, step by step, then why it works. The score pages at the end score every idea the review saw.

In every idea the user chooses to play. The reward comes once, only after the play is verified, and closing the game or a failed ad uses nothing up.

No idea passed every check, so the closest is drawn and marked as not a recommendation.

2 idea(s) split the reviewers, so they aren't drawn; the Needs your call page at the end lists them.

The explore step finished only part of its work: it used all 3 relaunches allowed (3 in the tour, 2 after it), so it stopped before seeing everything it planned to; the core loop completed 0 of 3 passes (last: no core action found on the screens seen).

1 extra Computer task today

Where the offer appears: A bottom sheet over the Computer home, opened when the user's Computer task finishes.

The offer says: "Play a short sponsored game to get 1 extra Computer task today. It stays available until midnight." Saying no changes nothing.

TODAY

The user's Computer task has finished and they are back on the Computer home.

WHEN IT APPEARS

A Computer task the user started finishes and they return to the Computer home, at most once per day.

THE OFFER

A sheet offers 1 extra Computer task today in exchange for playing a short sponsored game.

THE AD PLAYS

The user plays the short sponsored game and can close it at any time.

WHAT THEY GET

A label appears: "1 extra task ready until midnight".

They get: tasks, until midnight local time · **How often:** 1 per day, resets at midnight local time

Why this works for your app

WHAT THE USER GETS

Tasks, until midnight local time.

WHAT THE APP GETS

The app tells new users Computer is a limited preview whose main promise is handing off complex tasks, so a user who has just finished one has a clear reason to want another. One extra task a day keeps the preview feeling generous without touching anything free today, and builds a daily Computer habit. An agent task uses several model calls, so this pays for itself only for audiences with high ad value such as North America, or if the app runs tasks on a cheap model; it does not pay in low-value regions.

WHAT IT NEVER COSTS THEM

Nothing free is taken away, and saying no changes nothing. Every user sees the same offer.

Reach scenario, not a measurement: the offer sits on a screen a few taps in, and appears only when this happens: A Computer task the user started finishes and they return to the Computer home, at most once per day.

Closest idea: The reviewers split on "backed by what was seen in the app"; confirm it before building. "backed by what was seen in the app": one reviewer: no (The trigger and flow treat a finished Computer task returning the user to as existing behavior, but the model observes no task being completed or what happens afterward. The rationale also asserts that an agent task uses several model calls without product-model support); another: yes (The claims about the limited preview and the benefit line are backed by, and. The proposal states that the size of the allowance and any paid plan were not seen, so it does not rest on an open question).

Cost check (CONDITIONAL): a view pays for what it costs to serve only where ad prices are high. The review's cost line has the numbers.

When the reward runs out: At midnight the unused extra task expires, and the next finished task offers a new one, so users come back to hand Computer more work each day.

Every idea the review scored

Idea	Title	Verdict	Checks	Why
c01	1 extra Computer task today	conditional	10/11	didn't pass backed by what was seen in the app; cost check: a view pays for what it costs to serve only where ad prices are high
c02	A new home screen look for 7 days	conditional	10/11	didn't pass backed by what was seen in the app
c03	Computer runs your task every morning for 3 days	conditional	10/11	didn't pass backed by what was seen in the app; cost check: a view pays for what it costs to serve only where ad prices are high
c04	Your next 3 Computer tasks start first today	rejected	9/11	didn't pass backed by what was seen in the app, protects the subscription

Needs your call

- **c02 · A new home screen look for 7 days**

"backed by what was seen in the app": one reviewer: no (The what-makes-it-work-here and flow fields say users reopen Projects, Artifacts, and past Sessions or pick up a past session. shows those listings, but the product model does not establish reopening behavior); another: yes (Claims about today's app are supported or worded as 'not seen': no paid plan or limit seen, no theme options seen, and the Library lists Projects, Artifacts and Sessions. The rest is new design or prediction. The claim that the card sits between 'Start something new' and the Sessions list is not clearly supported and is noted separately).

To approve: {"id": "c02", "splits": ["c2_evidence"]}

- **c03 · Computer runs your task every morning for 3 days**

"backed by what was seen in the app": one reviewer: no (The 'what makes it work here' field says past results land in Library Sessions, but shows only a Sessions section; it does not establish where Computer task results go today); another: yes (The claims about today's app are supported: the 0 of 3 counter, the preview sheet's 'Automate recurring tasks on any schedule', and the Library Sessions list, with the Do pill at. The unseen cap and price are stated as not seen).

To approve: {"id": "c03", "splits": ["c2_evidence"]}

The reviewers split on these ideas, so none is drawn. To draw one, add its "To approve" entry to the list in **flows/approvals.json** and run flows again.
